Yep, he's pretty much across the street from the sinkhole. I just went out there and he was power spraying red paint off a trailer and most of the paint seemed to be staying on the concrete around the trailer but a small trail of water with paint pieces was going into the ditch. He was not happy to see me at all mainly because he is guessing it's a certain neighbor who called in the complaint and him and this neighbor are feuding about everything they can think of it sounded like. Anyway, I let him know that we can't have water containing paint going into the storm system and it was especially critical to get this all cleaned up out of his driveway since a storm is blowing in. When I was leaving he had out his shop broom and was sweeping up the paint shavings starting down where the water was entering the ditch and moving back up the driveway. Here's a picture.

Thanks Dan. I will investigate. They definitely should be containing this water and then working with our sewer guys to get permission to discharge it to the sewer.

Hello Carrie!

Hope your having a good day. I work for DNR, and we received an inquiry regarding the power washing of a large truck or trailer at a single family home located at 2301 Manchester in Springfield. I talked to Randy Lyman and he said your stormwater program may regulate this activity.

The caller was anonymous and just wondered if this situation was okay or not. Apparently, his neighbor is using a power washer to strip paint from the truck or trailer and all the dirty water is flowing into the street drain. The caller was concerned not only about the paint itself but wondered if the neighbor would have had to be using some sort of solvent to help strip the paint.

Let me know if we can help. My phone is 417-891-4344 in Springfield.

Thank you

Dan
